Manage and trace lifting accessories

The Luxembourg-based manufacturer of lifting accessories, Lifteurop, has launched a new management and traceability tool, Liftracer.

Lifteurop's lifting accessory safety equipment is subject to very strict standards. Their traceability is, therefore, becoming more and more important. The new Liftracer tool developed by Lifteurop allows lifting accessories to be traced and gives a real time access to all product related documents (certificate of conformity, instruction manual, technical data sheet, product video, etc). The entire product traceability process is digitised and customers have all the necessary information at hand.

Lifteurop has also developed this tool in order to limit document printing which, according to the Machinery Directive 2006/42/EC, must accompany the products. Liftracer facilitates the whole process of filing and archiving and avoids the loss of documents. Lifteurop now meets the packaging reduction requirements of the European Directive 2018/852.
